

Plaisted Premium Garden Mix

Improving soil conditions...naturally.

Successful gardening and plant growth depend upon good soil conditions. Healthy, fertile soil is a mixture of water, air, minerals and organic matter. One of the best ways to improve soil fertility is to add organic matter.

Plaisted Premium Garden Mix is the best mix on the market today, outperforming the common 1-1-1 mixes that only consist of soil with some decayed peat and fine sand. Fine sand actually hinders proper water drainage and air space.

Plaisted Premium Garden Mix adds organic matter that improves all attributes of the soil. Our premium mix consists of the following quality ingredients, precisely blended using our *Accublender*™ technology:

- Organic compost—provides porosity and helps retain nutrients
- Coarse fibrous peat—increases the soil's water holding capacity, benefiting the root system
- Screened soil—a high quality, uniformly consistent soil that helps increase cation exchange capacity
- Coarse sand—provides better porosity for proper water drainage and air space

Consistent quality, reliable delivery.

Our four-bin *Accublender*™ is used to create this popular mix. It features a computerized blender with an

on-board screen deck that removes oversized particles and a mechanical paddle wheel that ensures uniformity. It automatically adjusts for flow rates of material and stops the conveyor belt when feed bins need to be replenished.

Plaisted Premium Garden Mix features four quality ingredients, precisely blended.

Our Guarantee

We deliver on our promise, or make it right.
