

# Plaisted's Horse Arena Mixes

## Quality blended mixes for optimum riding surfaces

Whether you are building a new horse arena or you need to fix the one you have, there is nothing more critical to your success than to have the proper footing designed for what you want the horses to accomplish. Proper footing provides consistency, cushioning, traction and support for your horses; improving performance while minimizing injury.

## Arena mixes that are safe, non-toxic and affordable

The main component of arena mixes is the sand. The selection process takes into account the riding style, the number of horses using the ring and duration of ring use, watering capability for the ring, existing materials, and seasonal weather conditions.

Plaisted equestrian mix can be paired with durable soil amendments made from new polyester materials that are non-toxic and non-allergenic. These materials stabilize the sand particles and mimic the effect of the rooting system of turf.

Plaisted Companies will help you determine the correct type and depth of the Plaisted Horse Arena Mix for your need, and can deliver your mix.

### Material Options:

Class 5 Sand & Gravel – (base) .....	\$10.95 per ton
