

Plaisted's Amendment for Clay Soil

Plaisted's Amendment for Clay Soil consists of composted pine bark, organic compost, fibrous coarse peat, and coarse sand. The composted pine bark creates air space and allows water to get to the root system. The organic compost provides organic matter which develops a higher quality soil. Coarse fibrous peat allows maximum water holding capacity and helps retain nutrients for the plant. **Plaisted's Coarse Sand** is specially graded in larger size to allow for better drainage.

The problem with clay soil is the ground gets too hard for water to get to the root system and does not allow the roots to grow. The combination of **Plaisted's Amendment** mixed 50/50 with the native clay soil greatly improves the soil conditions for growing. It will turn the hard compact clay environment into nice loose soil so the roots can grow. **Plaisted's Amendment** also helps create the "Transition Zone" for trees and shrubs.

Consistent quality, reliable delivery.

Our four-bin *Accublender*™ is used to create these popular mixes. It features a computerized blender with an on-board screen deck that removes oversized particles and a mechanical paddle wheel that ensures uniformity. It automatically adjusts for flow rates of material and stops the conveyor belt when feed bins need to be replenished.

Plaisted's Amendment for Clay Soil is comprised of Plaisted's Composted Pine Bark, Plaisted's Organic Compost, Peat, Inc. Fibrous Coarse Peat and Plaisted's Coarse Sand.

Our Pledge

We deliver on our promise or we will make it right.
