

## Plaisted's Amendment for Sandy Soil

**Plaisted's Amendment for Sandy Soil** consists of screened soil, composted pine bark, organic compost, and fibrous coarse peat. The screened soil slows the water from merely running through the sand, and the small amount of composted pine bark helps create air space. The organic compost provides organic matter, which develops a higher quality soil. Coarse fibrous peat allows maximum water holding capacity and helps retain nutrients for the plant.

The problem with sandy soil is the ground gets too porous and the water runs through the soil. The combination of the **Plaisted Amendment** mixed 50/50 with the native soil greatly improves the soil conditions for growing. The Plaisted Amendment will turn the porous sandy area into a much better growing area that will retain water for the roots. It also creates the "Transition Zone" for trees and shrubs.

### Consistent quality, reliable delivery.

Our four-bin *Accublender*™ is used to create these popular mixes. It features a computerized blender with an on-board screen deck that removes oversized particles and a mechanical paddle wheel that ensures uniformity. It automatically adjusts for flow rates of material and stops the conveyor belt when feed bins need to be replenished.

**Plaisted's Amendment for Sandy Soil** is comprised of Plaisted's Screened Soil, Plaisted's Composted Pine Bark, Plaisted's Organic Compost, and Peat, Inc. Fibrous Coarse Peat.

### Our Pledge

We deliver on our promise or we will make it right.
