

HORSE ARENA MIXES

QUALITY BLENDED MIXES FOR OPTIMUM RIDING SURFACES

Whether you are building a new horse arena or you need to fix the one you have, there is nothing more critical to your success than to have the proper footing designed for what you want the horses to accomplish. Proper footing provides consistency, cushioning, traction and support for your horses; improving performance while minimizing injury.

Arena mixes that are safe and affordable

The main component of arena mixes is the sand. The selection process takes into account the riding style, the number of horses using the ring and duration of ring use, watering capabilities for the ring, existing materials, and seasonal weather conditions.

Plaisted Companies will help you determine the correct depth of the arena mix for your need, and can deliver it.
