IMPROVING SOIL CONDITIONS..NATURALLY

Successful gardening and plant growth depend upon good soil conditions. Healthy, fertile soil is a mixture of water, air, minerals and organic matter. One of the best ways to improve soil fertility is to add organic matter.

Our Premium Garden Mix outperforms the common 1-1-1 mixes that only consist of soil with some decayed peat and fine sand. Fine sand actually hinders proper water drainage and air space.

Our specially crafted formula adds organic matter that improves all attributes of the soil. This custom mix is precisely blended using our Accublender™ technology, and includes the following components.

- **Organic Compost** - provides porosity and helps retain nutrients
- **Coarse Fibrous Peat** - increases the soil's water holding capacity, benefiting the root system.
- **Screened Soil** - a high quality, uniformly consistent soil the helps increase cation exchange capacity
- **Coarse Sand** - provides better porosity for proper water drainage and air space

Ideal for: In Ground Amendment, Raised beds

Availability: Bulk
