

ROOFTOP GARDEN MIXES

IMPROVE BUILDING ENERGY EFFICIENCY, CREATE USABLE SPACE.

Green roofs are part of the healthy city movement, absorbing noise pollution and creating a peaceful meditative environment with aesthetic appeal on building rooftops. Plus, green roofs are helping to increase property values.

Our mixes are designed for extensive and intensive growing environments. They create a stormwater management system, improve energy efficiency of the building, and increase usable space for tenants. Plus, rooftop plants offer a naturally beautiful method to process airborne toxins through plants respiration.

Rooftop Garden Mixes are engineered to retain a high percentage of typical rainfall. We blend 3 types of rooftop materials. Depths vary depending on what types of plants materials are going to be used and what the roof weight load is designed to handle. These are some guidelines:

- **Extensive mixes;** 3" to 6" depth
- **Intensive mixes;** 6" to 12" or more in depth
- **Turf Mixes;** 6" to 12"

We custom blend mixes to specific architectural requirements. When given the building requirements per square foot, we'll create the exact quantity for your specifications. Please call ahead to reserve the product.
