THE KEY TO SMOOTHER & HEALTHIER LAWNS

Uneven lawns aren't just an eyesore - they can make mowing difficult, create low spots where water collects and leaves your turf looking rough and inconsistent. Plaisted Companies Lawn Leveling Mix is specially blended to help smooth minor dips and uneven areas while creating a better growing environment for your grass. Our 60/20/20 blend combines 60% mason sand, 20% screened black dirt and 20% peat to deliver the right balance of drainage, stability, organic matter and moisture retention.

The fine texture of mason sand makes the mix easy to spread and work into existing turf, while black dirt adds organic material and helps create a supportive environment for root development. Minnesota sourced peat helps retain moisture, making the blend especially useful when leveling, repairing thin areas or establishing new grass seed.

Use the same quality ingredients that has been trusted by the top golf courses in the Midwest to keep their fairways smooth and thriving. We also carry premium JRK grass seed and can serve as your one stop shop for the entire process.
